👤 Nam

📅 21/10/2000

📍 Hoà Cường, Đà Nẵng

Career objective

My goal is to gain a strong understanding of cryptocurrency, blockchain technology, and modern e-commerce systems, focusing on building scalable products with real-world impact. I aim to research and develop practical applications of Blockchain, payment infrastructure, and digital commerce solutions that improve how people transact, interact, and manage value online. Through this journey, I hope to deepen my expertise in distributed systems, fintech, and commerce technologies while continuously improving my teamwork, leadership, and product development skills.

Work experience

PENGUIN SECRET AGENCY CO., LTD

11/2025 - 5/2026

Fullstack Developer

- Applied AI-First development workflows to accelerate software delivery, debugging, architecture design, and code reviews.
- Developed scalable full-stack commerce and payment infrastructure for AI-driven commerce platforms.
- Integrated global payment systems using Stripe Connect, Authorize.net, Airwallex, and Checkout.com for onboarding, payouts, and checkout processing.
- Built secure checkout, recurring billing, subscription management, and transaction monitoring systems.
- Developed merchant/store management platforms and commerce tools similar to Shopify for orders, products, and payment operations.
- Designed RESTful APIs, webhook services, and event-driven architectures for payment and order synchronization.
- Optimized backend systems for scalability, reliability, and high-volume transaction processing.

Technical Stack:

- Frontend: TypeScript, Next.js
- Backend: Node.js, Nest.js, Python (FastAPI)
- Database: PostgreSQL, Redis
- Payment Infrastructure: Stripe Connect, Paypal, Authorize.net, Airwallex, Checkout.com
- AI Engineering: Claude, ChatGPT, Cursor, MCP (Model Context Protocol), AI Agents, Prompt Engineering
- Architecture & Tools: REST API, Webhooks, Docker, AWS, Prisma ORM, GraphQL, Claude

MEEY GROUP JSC

11/2025 - 5/2026

FullStack Developer - Blockchain Engineer

- Designed and developed end-to-end decentralized applications (dApps) within an RWA (Real World Assets) ecosystem, focusing on real estate tokenization (Property Token Offering – PTO).
- Developed and maintained smart contracts for core modules including asset tokenization, NFT standards, marketplace, staking, vesting, and governance mechanisms (ERC-20, ERC-721, and custom implementations).
- Built and optimized backend services using Node.js and NestJS to handle off-chain data processing, indexing, and synchronization with on-chain state.
- Integrated Web3 libraries (Ethers.js, Web3.js, Viem) to support wallet connections (MetaMask, WalletConnect) and multi-chain interactions (Ethereum, Base, Arbitrum).
- Designed scalable system architecture for DeFi components including staking pools, liquidity management, and yield distribution mechanisms.
- Collaborated with product, business, and community teams to launch tokenized asset offerings and onboard real estate partners into the ecosystem.
- Researched and implemented scalable blockchain solutions including Layer 2 integrations, modular architectures, and indexing services.

- Built subgraph/indexing systems to enable efficient on-chain data querying for real-time analytics and frontend performance optimization.
- Participated in smart contract reviews, gas optimization, and security improvements for high-value financial transactions.

Technical Stack:

- Smart Contract: Solidity
- Frontend: TypeScript, Next.js, React,
- Backend: Node.js, Nest.js, Go
- Database: PostgreSQL, mongodb
- Web3: Web3.js, Ethers.js, Viem
- Networks: Ethereum, Base, etc.
- Audit: Certik, SolidProof / TrustNet

FTECH CO., LTD

12/2022 - 10/2025

Blockchain Fullstack Developer

- Designed and developed end-to-end blockchain applications including smart contracts, backend APIs, and frontend logic
- Building and Developing Launchpad, AMM, Aggregator, DEXs, CLOB, NFT Marketplaces, DeFi platforms, GameFi projects, Paymaster ...etc
- Operate and coordinate with community team to add partner projects in certain streams.
- Integrated smart contract logic into frontend (Next.js) and backend (Nest.js)
- Conduct research on system architectures and propose solutions on various blockchain platforms.
- Building, fundraising, and applying to ecosystems on Solana, Sui, Aptos, Starknet, etc.
- Developed subgraphs and data services to support scalable and efficient dApp architectures.
- Knowledge about (crypto) trading mechanisms and products.

Technical Stack:

- Smart Contract: Solidity, Rust, Move, Cairo Language
- Frontend: TypeScript, Next.js, React.js,
- Backend: Node.js, Nest.js
- Database: PostgreSQL
- Web3: Web3.js, Ethers.js
- Networks: Ethereum, Polygon, BSC, Sui, Starknet, Solana, etc.

SOTATEK., JSC

01/2022 - 11/2022

Blockchain Developer

- Developed an NFT Marketplace using Wyvern Protocol and OpenZeppelin, integrating ERC721/ERC1155 contracts with on-chain metadata.
- Deployed and optimized EVM-compatible smart contracts, built a comprehensive test suite with Hardhat, Solidity, Ethers.js, and Typescript.
- Participated in the development of a DEX platform based on the Uniswap V2 protocol, implementing token swap and liquidity pool management.
- Technical Stack: Solidity, OpenZeppelin, Hardhat, Web3.js, Ethers.js, Typescript | Networks: Ethereum, Polygon, BSC.

ANEED

08/2021 - 12/2022

Smart Contract Engineer

- Developed Smart Contracts for prize-winning games.
- Developed Smart Contracts for the SocialFi theme of the VBI Lab Hackathon
- Researched and participated in Hackathons.
- link: <https://github.com/Connecus-Team/Smart-Contract-Connecus>
- Top 10 in the VBI Hackathon.

Technical Stack: Solidity, OpenZeppelin, Hardhat, Web3.js, Ethers.js | Networks: Ethereum, BSC

EUP GROUP

11/2020 - 7/2021

Data Engineer

- Collected vocabulary data sets for the website <https://mazii.net/>.
- Transferred data from CSV to database tables.
- Researched OCR problems for Japanese character detection and recognition.
- Utilized available Google APIs for OCR purposes.

Featured Projects and Skills

makezbrightgifts FullStack Dev 12/2025 - Present	• Description: E-commerce , AI Commerce / Agentic Commerce • Technologies: Nestjs, FastAPI Stripe, Paypal, ... • Team Size Dev: 10 • Role: FullStack Developer • Link: https://makezbrightgifts.com/ , https://shopquantum.ai/
MeyFi - MeyReal Full Stack Dev 10/2025 - Present	• Description: RWA (Real World Assets)+ DeFi + NFT Marketplace • Technologies: Solidity, Nestjs Base, EVM, • Team Size Dev: 10 • Role: FullStack Developer • Link: https://mey.network/ https://meyfi.io/
Ventory Full Stack Developer 03/2024 - 10/2025	• Description: NFT Marketplace+ Dex + Memecoin.Fun + Multi-chain • Technologies: Rust, Move, Solidity, Cairo, Nextjs Solana, EVM, Non-EVM • Team Size Dev: 5 • Role: smart contract programming, call contract with Nextjs, provide storage solutions, project operations, ... • Link: https://x.com/Ventory_gg
Bluemove Full Stack Developer 03/2023 - 05/2024	• Description: NFT Marketplace+ Dex + Memecoin.Fun + Bot • Technologies: Rust, Move, Nextjs Sui • Team Size Dev: 5 • Role: smart contract programming, call contract with Nextjs • https://dex.bluemove.net/, https://movepump.com/, https://x.com/bluemove_oa
Dragark Blockchain Developer 03/2024 - 05/2025	• Description: A fully onchain game • Technologies: Cario, Dojo, TypeScript Starknet • Role: smart contract programming in cairo, dojo connection for fully onchain game. • Link: https://x.com/playDRAGARK
Pace Art NFT Blockchain Developer 02/2022-10/2022	• Description: Nft Marketplace • Technologies: Solidity, OpenZeppelin, Web3.js, Ethers.js • Team Size Dev: 3 • Role: smart contract programming, call contract with Nextjs, provide storage solutions • Link: https://www.sotatek.com/portfolio/pace-art-nft/
IDO Platform Blockchain Developer 01/2022-02/2022	• Description: Dual ICO and INO Launchpad • Technologies: Solidity, Reactjs Ethereum, Arbitrum • Team Size Dev: 3 • Role: smart contract programming, call contract with Nextjs, provide storage solutions • Link: https://www.sotatek.com/portfolio/ido-platform/
Technology skills	• Researching airdrops, monitoring the market, and following potential Blockchain projects. • learn the new language of new blockchains
Other skills	• Capable of self-learning and problem-solving • Proficient in using: Windows, Linux, Git • Able to read and work with documents in English.

Education

FUNIX (FPT)

10/2021 - 05/2022

BlockChain Developer

- Smart Contracts.
- Blockchain & Distributed Technologies.
- DApp Development, DeFi Protocols & Tokenomics
- Tools & Frameworks

HANOI UNIVERSITY OF INDUSTRY (HAUI)

08/2018 - 01/2022

Information technology

GPA: 2.9/4

experimental activities

HAUI INFORMATION TECHNOLOGY OLYMPIC TEAM

01/2019 - 2022

Member

- Practiced algorithmic thinking
- Awarded 3rd prize in the ACM/ICPC University Contest organized by the Military Technical Academy.
- Qualified for the National round of the ACM/ICPC contest.

HANOI UNIVERSITY OF INDUSTRY IT CLUB

11/2019 - 2023

Member

- Organized student competitions such as the HaUI ACM-ICPC with over 50 teams
- Supported Python, C/C++, Algorithm, and Data Structure programming classes.
- Independently researched AI problems.
- Received a consolation prize in the Olympiad organized by the University and the Club

Awards and Certifications

Starknet Winter Hackathon : <https://app.buidlbox.io/starknet/starknet-winter/overview>

01/2025

First Prize of MCI Competition - The Expert Coder 2021

08/2021

THIRD PRIZE ACM/ICPC UNIVERSITY COMPETITION

10/2019

DATA SCIENCE WITH FACEBOOK DEVELOPER CIRCLES

10/2019
